Search Tips

Boolean searches

Use the Boolean Operators AND, OR, NOT within search fields. By default, an AND relationship is assumed between search terms unless another operator is specified.

Searching for authors

When searching for multiple authors, separate each author name with either AND or OR. Using AND will search for content that has been co-authored by the authors. Using OR will search for content that has been authored by either of the authors.

Searching for phrases

Enclose your search term with quotation marks to search for an exact match of that phrase. Without quotation marks, articles including all of the search terms somewhere in the article will be listed. For example, searching for "hip arthroplasty" will find articles containing that exact phrase.

Wildcards

Use a question mark (?) in a search term to represent any one character and use an asterisk (*) to represent zero or more characters. For example, searching for Europe* will find results containing Europe and European. Wildcards cannot be used at the start of a search term or when searching for phrases in quotes.

About

ORTHOPAEDIC PROCEEDINGS

Orthopaedic Proceedings contains abstracts of papers presented at recent scientific meetings organised by orthopaedic associations and specialist societies. Please note that this does not include posters. The purpose of the supplement is to disseminate new ideas with minimum delay throughout the world community of orthopaedic surgery.

The abstracts are prepared by the editorial secretaries of the participating societies and are sent to *The Bone & Joint Journal* as electronic files. They are published without further editorial amendment and we do not perform any post-publication corrections. It is the
